## Designing Low Voltage Networks for a Better Future

### VisNet® Design

Helping network operators and connection providers to design and model existing network connections and new requests

From EA Technology

# VisNet® Design is an online software tool which helps connection providers and network operators to design and model existing network connections and new requests.

These connections can range from a simple service connection for a new property to an entire network built out from a substation. The tool also features various models for low carbon technologies, including EV charge points, solar photovoltaics, and heat pumps.

## Why Use VisNet® Design?

- Easy to use web application that works on a wide variety of devices.
- Centralised file management to access saved models.
- Network schematic and assessment results shown together on a map view.
- Comprehensive report for network design summary and assessment results.
- Auto-calculated cable lengths from GIS co-ordinates.
- Calculates smallest compliant cable sizes.
- Rapid assessment of complex networks.
- Minimal training requirements.
- Cost effective with clear, simple pricing model.
- Easy deployment with automatic updates.
- Enterprise system integration is available separately.
- Includes backwards compatibility with WinDEBUT, ensuring a seamless transition for your existing projects.

## How to Use VisNet® Design

Login to VisNet® Design

Enter the  
site location

Run the model

Position and configure  
the required assets

Save the results

VisNet Design gives an intuitive web-based experience to provide rapid modelling of LV networks. It is compatible with modern web browsers and is optimised for Chrome and Edge. It provides a modern, mobile-friendly, touchscreen enabled replacement to WinDEBUT through a simple subscription-based licensing model.

VisNet® Design also includes backwards compatibility with WinDEBUT, ensuring a seamless transition for your existing projects.
